

# 13 Personnel management software

## What does it do?

Personnel management software is used by many care providers. Amongst other things, the software can manage staff's schedules, pension and holiday entitlements and calculate their payment.

[Emerging technology: this technology is not yet available for carers but is established for care providers.]

## What can it be used for?

**#CareServiceManagement** A slimmed-down version of the personnel management software used by care providers could be used by carers to manage privately organised and funded care workers.

This would only be of interest if we were directly employing someone, which at the moment we have no intention of doing	1	Violet Tiger	Aug 31, 2020, 02:06 PM
I used spreadsheets to manage mums care, social life, medical appointments, finances, shopping, bills etc. You have to find the way that works best for you as a carer. I'm sure app fans will love something like this if it could be designed in a user friendly way.	2	Purple Cat	Jun 30, 2020, 04:50 PM
