

# 14 Missing person app

## What does it do?

If a person goes missing, a missing person app can be used to notify the network of app users, upload a description of the missing person, and ask the network to keep an eye out.

## What can it be used for?

**#PersonLocator** Carers can use the app to ask the network of users for help to look for missing PwD. This can help carers to locate PwD in case they get lost when out and about.

Not sure this is very feasible as it would rely on a significant uptake of use of the app which would mainly be of interest to people who may have people going missing? Use of GPS tracking and social media appeals as well as police involvement probably more effective?	1	Violet Tiger	Aug 31, 2020, 02:07 PM
This relies on the successful uptake of the app and more specifically, in your area - not something that can be guaranteed. Better to report the person missing to the police using Herbert Protocol information.	2	Purple Cat	Jun 30, 2020, 04:53 PM
