

18 Environmental hazard detectors

What does it do?

Environmental hazard detectors can detect gas, smoke, heat and/or power cuts. Heat detectors can be placed near cooking stations where smoke detectors would not be helpful.

Environmental hazard detectors can either raise a localised alert or send an alert or notification to a call centre or smartphone app via the internet.

What can it be used for?

#EnvironmentalHazardDetection These devices can alert PwD and their carer (or optionally an emergency response team via a connected call centre) to a potentially dangerous situation in their residence.

I think these are essential to help keep people with dementia safe at home and to give reassurance to carers	5	Violet Tiger	Aug 31, 2020, 02:13 PM
For early stage dementia this sounds like an excellent idea for a person living alone, enabling them to maintain their independence. Even as the disease progressed this would prove a great way of maintaining safety of the person with dementia by alerting a carer or centralised call centre, (assuming a key safe is already in place)	5	purple cat	Jul 01, 2020, 04:46 PM
